

There's a New King In Town!

NEW
Design

*King II shown here with optional second handrail

The King II

The King Aqua Staircase has been redesigned with you in mind! Using customer feedback, The King II has a sleeker design, more comfortable tread and easier to assemble handrails, all while keeping it's strength and durability.

No Maintenance White PVC Rail

Resin flange secures step to deck.

Port holes allow water to circulate through staircase.

*King II shown here with standard single handrail

King II step shown in Blue Granite

Able to support 700 pounds!

The Duke

Built smart, built strong, built customer friendly.

There is only one step built tough and smart enough to be called the Aqua Staircase. Using rotational molding technology, the Aqua Staircase is a one piece step system manufactured from top quality PE resins. The Aqua Staircase derives its strength from its simplicity! Its smooth roto-molded bottom edge makes it more liner friendly than other steps on the market.

Quality and Performance.

The Aqua Staircase is a simple and sturdy step system for your above ground pool. Assembly takes just a few short minutes to attach the handrail* and deck flange. No other assembly is required! The Aqua Staircase features stainless steel hardware and a white PVC handrail. Custom ballast bags are provided with each Aqua Staircase.**

Available Colors***

* Optional second handrail available for King step.
** Ballast (Sand, Pea Gravel, Etc.) not included.
*** Colors may vary from printed brochure.
